SIGNATURE SCANNING

L-50X and OPI-3301i

FRENCH POST ("LA POSTE") CHOOSES OPTICON'S 2D SCANNERS

**LA POSTE**

The French Post has ordered 15,000 2D scanners from Opticon.

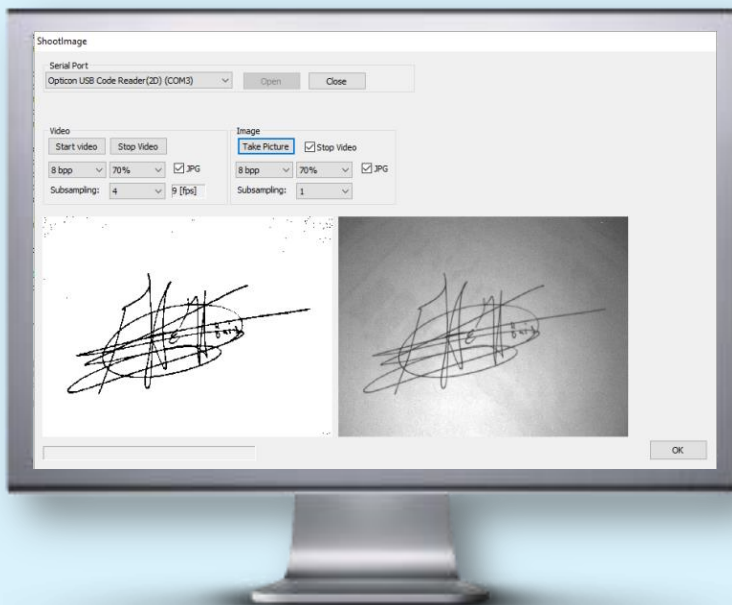

The scanners will be deployed in the coming years at all regional post offices in France. The models L-50X and the wireless OPI-3301i were in favour and selected for reading 1D and 2D barcodes

from paper, laminated documents and LCD screens at any lighting condition.

OPTICON CREATED THE SOFTWARE

Opticon developed custom made software to register the pickup of a package or letter by the customer. This application simply scans the signature of a passport or ID card, decodes and saves it to record evidence (track & trace history).

The Opticon application interface (API) takes care of the connection with the French Post software.
